

Strandek Environmental, Health & Safety Policy

At Strandek, we are firmly committed to providing the highest standard of EHS performance to protect and safeguard the health and safety of the public, our customers, employees and any other contractors working with Strandek employees, as well as mitigating any impact on the environment.

Our policy is designed to achieve:

- Legal, environmental, health and safety regulatory compliance
- A safe, working environment where safe equipment and personal protective equipment (PPE) are readily available and COSHH, risk assessments and method statements provide the foundation of any project.
- A high standard and consistent level of training for any employees and future employees
- The highest standard of work possible, via an effective quality control strategy to source materials from approved suppliers with high-quality, CE-marked materials
- Compliance in commitment to preventing all accidents and incidents and take steps to minimise future occurrences via corrective and preventative action procedures (CAPA).
- Compliance with RIDDOR to ensure that any accidents, diseases and near misses are reported and dealt with accordingly.
- Operation in a socially responsible manner, encouraging energy and resource efficiency through a cycle to work scheme, regular maintenance of company vehicles and reduced electrical consumption
- Neutral or net-negative carbon emissions by offsetting with the Carbon Footprint scheme
- Responsible waste disposal and ideally the recycling of used materials where possible, as a means to reduce landfill.
- A sustainable, environmentally friendly product and service offering, sourcing materials free of heavy metals and volatile organic compounds (VOCs) and low in carbon emissions where possible.
