

Water Tank Lining

Water tanks are an important part of agricultural, commercial, industrial and domestic water supply. One of the key features of a water tank centres on the integrity of its surfaces. Effective primary containment systems are an important part of HSE requirements in the UK. Concrete and other substrates are typically prone to . In many cases, the [HSE recommends GRP as an effective lining system for water storage](#). In this example, we used [WRAS-compliant resin](#) to create a fibreglass (GRP) lining to provide effective waterproofing and containment for a commercial customer. This was a 2-day process whereby the tank surface was scaled back, a resin primer applied followed by glass fibre laminate and a resin topcoat.
