

Fibreglass (GRP) Lining & Coating

Images depict a substantial installation of waterproofing features to service ducts, cable and pipe exit points from within the roof structure. This procedure required timber formwork construction to the adjacent areas which was then over laminated in standard Built GRP fibreglass laminate. This was cold applied in-situ.

Multiple installations occurred on 4 roof levels working closely with other trades and in challenging confined area conditions. A very high standard of workmanship was required to complete each unit thereby ensuring 100% water tightness and no ingress to internal structures.

Completed installation resulted in our client confirming their absolute satisfaction with the performance and high standards demonstrated by Strandek throughout the contract.

Performance

Fibreglass is an incredible form of waterproofing for many applications. When installed correctly, it has multi-decade performance.

Steve Bowen®, Managing Director, Strandek GRP Systems

About Strandek

Established in 1976, Strandek specialise in a range of waterproofing solutions. Working with a range of customers, they offer exceptional performance and a high-quality of workmanship.
